

oxygenetixSM

Institute

Oxygenetix Institute introduces the first Gel Based Oxygenating Foundation formulated exclusively, for physicians and professionals.

New, breakthrough Oxygenating Foundations and a Moisturizer that all work like a virtual breathable second skin.

Sensitive Skin Conditions Can Be A Daily Concern

Sensitive skin following cosmetic procedures can put your patient's lifestyle on hold while healing. However, post surgical evidence can be lessened and camouflaged by using Oxygenetix gentle, soothing cover up foundation.

This special Blue Base / Yellow Base color matching system works with specific skin tones to reduce or eliminate post surgical discolorations while allowing the patient to heal and feel more confident in public.

Once the patient has completely recovered, continued use will help protect and improve skin tone.

We use a natural Aloe Gel base and Ceravitae™ Pro-Oxygen complex with no heavy oils, alcohols, or added water, to make potent high-end skin care for your patients, that is also an oxygenating, breathable foundation.

Tender Skin Conditions

These seem to never go away. Acne, Rosacea, and sensitive skin can be painful and embarrassing, and may even result in scarring. Typical makeup aggravates these skin conditions. Oxygenetix is ideal and beneficial to them.

Skin Discoloration

Age spots, liver spots, vitiligo and melasma can return even after treatment. Sun damage becomes visible with age. Oxygenetix is perfect to camouflage and conceal.

UVA/UVB Rays

UVB rays mainly cause burning. UVA rays effect deeper skin layers causing premature aging by damaging DNA and the skin cells that produce collagen and connective tissue. Oxygenetix non chemical SPF25 full spectrum physical sunblock solves these problems without irritation.

"There is finally a makeup for extraordinarily sensitive and acne prone skin."

Christine Ibrahim, M.D.

FAQ's

Q: Why should I carry Oxygenetix?

A: Oxygenetix is the only oxygen treatment, air permeable make-up on the market. It will make your patients look great while they are recovering. It promotes healing & keeps skin looking young and beautiful.

Q: Can people with sensitive skin use Oxygenetix

A: Oxygenetix is safe for every skin type, including post-procedural and sensitive skin. It soothes and promotes healing of skin and doesn't irritate or cause break-outs.

Q: Has Oxygenetix been clinically tested?

A: Yes, Oxygenetix has been tested by physicians and their patients.

Q: What is Ceravitae? What does it do?

A: Ceravitae does the "heavy lifting when it comes to proliferating young, fresh and plump skin cells, by delivering high amounts of oxygen. This aerobic effect helps to make those vital productive cells work harder.

Q: What procedures can Oxygenetix be used after?

A: Oxygenetix can be used after: CO2 Laser - Rhinoplasty - Laser Hair Removal -Acne/Rosacea Treatments - Facial Surgery Bruising - Scar Revision - Skin Resurfacing - Injectables - Eye Surgery - Dermabrasion - Chemical Peels.

Q: Can Oxygenetix be used as an everyday make-up?

A: Yes, Oxygenetix was formulated for post-operative healing and full, undetectable coverage. continued use promotes youthful, healthy skin through oxygen driven cellular turnover in a breathable, second skin formula.

Q: Is Oxygenetix good for your skin?

A: Oxygenetix is great skin care that just happens to be a make-up product.

Oxygenetix is only distributed by medical professionals. To purchase, go to [Oxygenetix.com](http://www.oxygenetix.com) for locations near you.

Oxygenetix vs. Lycogel

Important Differences Between Lycogel and next generation Oxygenetix

1. Oxygenetix is even more Breathable - Lycogel contains occlusive oils and known irritants such as phenoxyethanol.
2. Oxygenetix is transfer resistant - Lycogel only slightly.
3. Oxygenetix can be used immediately following laser procedures - Lycogel days later.
4. Oxygenetix soothes post-procedure and irritated skin conditions - Lycogel can irritate sensitive skin.

Formulator and product designer, Barry Knapp, created both products. Lycogel was ground breaking and proved to be a huge success when brought to market back in 2001. Today Mr. Knapp introduces Oxygenetix, the culmination of his years of research and listening to doctor and patient input. Oxygenetix takes the category to a whole new level of providing relief and helping patients look and feel better, even before leaving the doctors office. It's continued use promotes youthful healthy skin, and provides breathable flawless coverage for all skin types.

"Oxygenetix is the finest product I have ever produced. I am thrilled that my life-long goal of creating the perfect post procedure foundation has now been realized"

Barry Knapp

What makes OXYGENATING FOUNDATION unique

- 1 Exclusive patent pending CERAVITAE™ continually introduces oxygen, speeding skin cell production of collagen and elastin.
- 2 The only foundation that allows vital oxygen into the skin - acting like aerobics for the skin.
- 3 Soothing, healing Aloe Vera is used instead of water helping resurface skin by sloughing dead cells.
- 4 Physical UVA/UVB sunscreen helps protect skin without the irritation caused by non-breathable chemical sunscreens that are so often used.
- 5 Greater skin cell production and turnover helps reduce wrinkles, fine lines and spots.
- 6 Transfer and water resistant won't come off on clothing stays on in water.

Oxygenetix Oxygenating Moisturizer

Oxygenetix Face Moisturizer contains the same breathable "second skin" formula as the Oxygenating Foundation. Most moisturizers sink into the skin or sit on the surface, which can suffocate your skin by blocking the vital flow of oxygen.

Oxygenetix Face Moisturizer forms a breathable "second skin" to provide instant hydration while reducing the signs of procedure. It helps plump the skin leaving the perfect palette for Oxygenating Foundation. Beneficial Hyalaurons and PCA's ensure your skin is receiving maximum hydration and protection at the same time.

Andrew Ordon, M.D., F.A.C.S., Host of the daytime series The Doctors.

"Oxygenetix is the best makeup available to patients after a procedure. There's no other product that contains the healing and protective qualities the skin needs immediately after an aesthetic procedure. It also provides coverage that can stand up comfortably to the bright lights of a Hollywood set."

Acclaimed Beverly Hills plastic surgeon, Dr. Ordon is currently an assistant professor of plastic surgery at Dartmouth School of Medicine and The University of Connecticut.
